

S2S-10: SLO and Alerting Migration

Series: S2S | **Notebook:** 10 of 12 | **Created:** March 2026 | **Last Updated:** 03/23/2026

Overview

SLOs and alerting are the core of production monitoring. This notebook covers migrating SLO definitions, notification rules, and alerting configurations while handling entity ID references and evaluation window gaps.

Table of Contents

- [1. SLO Migration Strategy](#)
- [2. Notification Rule Migration](#)
- [3. Alerting Profile Migration](#)
- [4. Maintenance Window Migration](#)
- [5. Validation Queries](#)

Prerequisites

Requirement	Details
Target Tenant	Agents reporting, data flowing
Exported Config	SLOs and alerting from S2S-02
Tags	Auto-tags and enrichment configured in target

1. SLO Migration Strategy

Converting Entity ID Filters to Tags

Most SLOs reference entities by ID. Convert to tags before migration:

Source SLO Filter	Target SLO Filter	Why
<code>type(SERVICE),entityId(SERVICE-xxx)</code>	<code>type(SERVICE),tag(app:checkout)</code>	Portable across tenants
<code>type(HOST),entityId(HOST-xxx)</code>	<code>type(HOST),tag(env:production)</code>	Works in any tenant
<code>type(SERVICE),mzId(123)</code>	<code>type(SERVICE),mzName("Production")</code>	Management zone IDs change

Terraform SLO Import

```
resource "dynatrace_slo_v2" "checkout_availability" {
  name           = "Checkout Availability"
  enabled        = true
  evaluation_type = "AGGREGATE"
  filter         = "type(SERVICE),tag(app:checkout),tag(env:production)"
  target         = 99.5
  warning        = 99.9
  evaluation_window = "ROLLING_WEEK"
  metric_expression = "100*(builtin:service.errors.server.successCount:splitBy())/(builtin:service.requestCount.server:splitBy())"
}
```

2. Notification Rule Migration

Export from source and apply to target:

```

resource "dynatrace_alerting" "critical" {
  name = "Critical Alerts"
  rules {
    severity_level = "AVAILABILITY"
    delay_in_minutes = 0
    tags {
      filter {
        context = "CONTEXTLESS"
        key = "env"
        value = "production"
      }
    }
  }
}

```

3. Alerting Profile Migration

Configuration	Migration Notes
Severity filters	Port as-is
Tag filters	Ensure tags exist in target
Delay settings	Port as-is
Event filters	Port as-is

4. Maintenance Window Migration

Maintenance windows are timezone-sensitive:

Setting	Verify
Schedule (cron)	Same timezone in target
Scope	Update entity references to target
Suppression type	Port as-is

5. Validation Queries

Verify SLOs are evaluating in the target tenant:

```
// Check SLO status in target tenant
fetch logs, from:-1h
| filter matchesPhrase(log.source, "audit")
| filter contains(content, "slo")
| fields timestamp, content
| sort timestamp desc
| limit 20
```

Next Steps

Continue to **S2S-11: Cutover Execution and Validation** for the final migration checklist.
